Abstract (en)
[origin: WO2023012035A1] Disclosed is a method for manufacturing a timepiece component, the method being characterised in that it includes the following steps: – recessing (E1) an upper surface (21) of a substrate (20) so as to form a hollow (30) delimited by at least one surface (31), which is inclined relative to the plane (P1) in which said upper surface (21) of the substrate (20) extends; – forming (E3) at least one flank (41) of the mold, said step comprising depositing (E31) a material onto at least a portion of the surfaces of the substrate (20), optionally coated with a conductive layer and/or an anti-glare layer (25), so as to form a mould at least partially delimited by at least one flank (41) of said material and by said at least one inclined surface (31) of the hollow (30) and optionally by at least a portion of the upper surface (21) of the substrate (20).
