Abstract (en)  
[origin: WO2023011744A1] The invention relates to a method for detecting a change in a communications channel system of a vehicle (100), the method comprising the steps of: a) transmitting (200) a broadband transmitted signal, b) receiving (300) a received signal, c) determining (500) in-phase and quadrature-phase data of a channel impulse response of the communications channel system based on the received signal, – repeating steps a) to c) multiple times to determine (500) respective in-phase and quadrature-phase data of a plurality of channel impulse responses, – determining (600) a respective actual phase angle ( $\phi_{i, \text{Ist}}$ ) of the plurality of channel impulse responses at a characteristic location (C1, C2), – determining (650) a respective phase rotation angle ( $\phi_{i, \text{Drehen}}$ ) of the plurality of channel impulse responses from the actual phase angle ( $\phi_{i, \text{Ist}}$ ) and a fixed, definable target phase angle ( $\phi_{\text{Soll}}$ ), – rotating (700) the plurality of channel impulse responses in a limited field of observation (A2, A3) of a delay time direction ( $t_{\text{delay}}$ ) of the plurality of channel impulse responses about the respective determined phase rotation angle ( $\phi_{i, \text{Drehen}}$ ) by means of a rotating unit (70), – detecting (800) the change in the communications channel system on the basis of a change in the in-phase and/or the quadrature-phase data.
