Abstract (en)

[origin: WO2023012351A1] Systems and methods related to controlling and ensuring uncertainty reporting from Machine Learning (ML) models are disclosed. In one embodiment, a method performed by a first node comprises sending, to a second node, one or more output predictions from a first ML model together with uncertainty information about the one or more output predictions. In this manner, the robustness and/or consistency of models and/or procedures that use the one or more output predictions can be improved. Corresponding embodiments of a first node are also disclosed. Embodiments of a second node and methods of operation thereof are also disclosed.
