Abstract (en)

Head-mounted tool for adjusting face muscle position is provided. The Head-mounted tool includes a head-mounted tool body (1), one or more traction strips (2) having one end connected to the head-mounted tool body (1), and an adhesive surface (3) connected to the other end of the traction strips (2) and attached to the face muscle. The head-mounted tool body (1) includes a headband (101) for wearing the head-mounted tool on a head of a human body. The head-mounted tool overcomes the defects in the prior art that repositioning of the face muscle is not flexible, the firmness of the positioning is not high enough during a sitting posture, a lying posture, or different posture change, the comfort is low, or the like. The head-mounted tool can quickly pre-position a youthful position of the face muscle before the simple and convenient beauty technique, thereby meeting people's increasing needs for beauty.
