Abstract (en)

[origin: WO2023059938A1] A device may include a vehicle comprising a plurality of network zones, each network zone comprising a plurality of end points. A device may include a controller, comprising: a network monitoring component configured to interpret network communications associated with at least one of the network zones, a network intrusion detection component configured to detect an intrusion event in response to the network communications; and an intrusion response component configured to perform an intrusion response operation in response to the detected intrusion event.
