Abstract (en)

[origin: WO2023016836A1] Disclosed is a device (100) for discharging an electric energy store (10) of an electric apparatus, wherein: - the device (100) is designed to recognize a discharge event requiring that the electric energy store (10) be discharged within a specific time; - the device (100) is furthermore designed to activate the discharging operation of the electric energy store (10) by means of a discharging element (11); - in a discharge event, the discharging element (11) can be connected in parallel to the electric energy store (10).
