Abstract (en)

The present disclosure relates to a cleaner station and a cleaner system including the same. The cleaner system includes a surrounding cleaning device which is disposed in the passage, is driven by the suction force of the dust collection motor, and cleans a surrounding area of the housing. Since the surrounding cleaning device can clean the surrounding area of the housing, the cleaner station is able to conveniently clean dust accumulating around the cleaner station even without separately operating the cleaner coupled to the cleaner station, and the cleaner system includes the cleaner station.
