Abstract (en)  
[origin: WO2023022977A1] Aspects herein are directed to a strap system having an adjustable stretch that is suitable for upper body garments, lower body garment, and articles such as bags and articles of footwear. The strap system includes a pair of straps that are coupled together in a face sharing relationship by a coupling mechanism. One of the straps in the pair of straps has greater stretch properties than the other strap. A total stretch of the strap system is adjustable by moving the coupling mechanism along a length of the strap system.
