Abstract (en)

[origin: CA3226255A1] The invention relates to a microneedle device (10), in particular a manually applied microneedle device (10). The microneedle device (10) has a microneedle array (12) and a sensor device (14) connected to the microneedle array (12). The sensor device (14) is designed for detecting at least one force acting on the microneedle array (12). The invention also relates to a method for detecting at least one force acting on a microneedle array (12) by means of a sensor device (14) connected to the microneedle array (12). The invention further relates to a method for applying a microneedle array (12).
