Abstract (en)
[origin: WO2023021341A1] The present invention relates to a bicycle frame (2), more particularly for an e-bike (1), comprising: a first frame portion (10) having an interior (12) for receiving at least one battery unit (3); a second frame portion (20), which is connected to the first frame portion (10) and runs to a rear-wheel holder (5); and a receiving region (30) for a transmission unit (40), the receiving region being associated with the frame portion (10); wherein the first frame portion (10), the second frame portion (20) and the receiving region (30) are designed such that cables (50) run substantially within the first frame portion (10) and the second frame portion (20) and only cables used to connect the transmission unit (40) are led into the receiving region (30).
