Abstract (en)

[origin: WO2023023094A1] Article packaging includes a retention panel and a retention structure formed, at least in part, by the retention panel and configured to engage the article. The retention structure includes a retention surface configured to contact the article. The article packaging also includes a friction coating disposed on at least a portion of the retention surface of the retention structure. The friction coating impedes movement of the article relative to the retention panel.
