Abstract (en)

[origin: WO2023020725A1] The invention relates to a method for inspecting containers (10) provided with container closures (12), wherein the container closure (12) has a closure cap (12a) screwed onto a mouth of the container (10), a securing means (12b) arranged on the container (10) below the mouth (10a) in a longitudinal direction (L) of the container, a connecting strand (12c) that connects the securing means to the closure cap (12a), a first attaching section (12d) where the connecting strand is attached to the closure cap, and a second attaching section (12e) with which the connecting strand is arranged on the securing means, wherein the containers are transported by a transport unit and inspected by an inspection unit (2), wherein a rotational position of the closure cap (12a) relative to the container (10) is determined, wherein a first marking located on the container (10) is recorded in order to determine the rotational position, characterised in that the rotational position of the container closure is determined from a position of the connecting strand and/or a position of at least one attaching section (12d, 12e).
