Abstract (en)
[origin: WO2023052335A1] Disclosed herein are examples of a coverage enhancing device comprising a first antenna input configured to receive a first signal, a second antenna input configured to receive a second signal, a first antenna output configured to output the first signal, a second antenna output configured to output the second signal, wherein a relative arrangement of the first antenna input and the first antenna output is different from a relative arrangement of the second antenna input and the second antenna output.
