Abstract (en)  
In the screening arrangement (10), a position indicator (16) is slidably positionable along one of the side rails (12) for manually indicating a desired longitudinal position of the bottom element (14). The longitudinal position of the position indicator (16) is manually adjustable by physical movement of the position indicator (16) to an arbitrary longitudinal position along the at least one side rail (12). A bottom element (14) connected to the bottom portion of the screening body is configured to be longitudinally positionable in the longitudinal direction (L) to provide a screening position by means of electric drive means operably connecting the bottom element (14) and the side rails (12, 13). The position indicator (16) is configured to engage the bottom element (14) by releasable positive engagement means when the bottom element (14) is brought into contact with the position indicator (16) to assume an engaged condition.
