Abstract (en)
This electromagnetic steel plate for a reactor comprises: a central component including a plate-like first portion extending in a first direction, and six second portions provided integrally with the first portion and comprising three on either side in a second direction orthogonal to the first direction, the second portions protruding from the first portion and having a plate-like shape extending in the same plane as the first portion; and an outer component having an area such that, in a state in which a pair of the central components are combined such that the respective three second portions are opposed to each other, a gap between the second portions adjacent to each other can be filled, the outer component having a plate-like shape extending in the same plane as the first portion.
