Abstract (en)
[origin: WO2023073056A1] The present invention relates to an autoinjector (10), the autoinjector comprising a housing (12), a needle guard (18) mounted axially moveable in the housing for movement between a storage state, a dispensing state and a lock-out state in which states the needle guard adopts different axial positions relative to the housing, with the needle guard being configured to be axially moved in a proximal direction between the dispensing state and the lock-out state.
