Abstract (en)

[origin: WO2023025675A1] The invention relates to a scaffold post, in particular for vertically oriented installation in a scaffold section, said scaffold post comprising: a base post which extends along a longitudinal axis; at least one connecting disc which is attached to the base post, the connecting disc enclosing the base post and projecting in a radial direction to the longitudinal axis and in a circumferential direction around the entire base post; at least two connection hooks which are attached to an outer circumferential surface of the base post and, when viewed from above, extend, in a direction of extent, radially away from the longitudinal axis from a plane perpendicular to the longitudinal axis; and at least two partial connecting discs which are attached to the base post, the partial connecting discs projecting to different extents beyond the base post in a radial direction to the longitudinal axis, as viewed in a circumferential direction around the base post. The invention also relates to a scaffold section comprising a base post and to a method for constructing such a scaffold section.
