Abstract (en)
[origin: WO2023025841A1] An architectural opening covering includes: a first rail configured to translate laterally in opposite first and second lateral directions; a second rail configured to translate laterally in the opposite first and second lateral directions; a shade material extending between the first and second rails; and a motor drive configured to translate only the first rail selectively in the first and second lateral directions; wherein the second rail is configured to be translated in the first and second lateral directions manually by a user; and wherein the motor drive and the first rail are together configured to translate the second rail in the first lateral direction by the first rail pushing the second rail in the first lateral direction.
