Abstract (en)

[origin: WO2023025337A1] The present invention relates to a method for determining operating variables of a drum brake, the method comprising the following steps: a) recording at least one support force of a brake jaw (12, 14) of the drum brake by means of a sensor, and b) determining the operating variable based on the support force, the operating variable being selected from the brake lining friction value and the spreading force.
