Abstract (en)

[origin: WO2023025988A1] A transfer system (1) for transferring streaming data is disclosed. The transfer system comprises data sources (10a, 10b) configured to generate first streaming data (101), data input systems (20a, 20b, 20c) configured to generate second streaming data (102) based on the first streaming data (101), data reducing systems (30a, 30b, 30c) configured to generate reduced data (103) based on the second streaming data (102), and a data output system (40). The transfer system comprises also a service mesh (70) with data input proxies (21a, 21b, 21c), data reducing proxies (31a, 31b, 31c), and a data output proxy (41). Data transfer in the transfer system (1) is arranged through said proxies into and from the data input systems (20a, 20b, 20c), the data reducing systems (30a, 30b, 30c) and the data output system (40). A related method (300) is also disclosed.
