Abstract (en)

[origin: WO2023031126A1] The invention relates to mouthpiece (10) for inhaling an aerosol, comprising an airflow channel (14) for the aerosol extending through the mouthpiece, a flavor compartment (16) comprising at least one flavoring agent (12) for flavoring the aerosol, the flavor compartment being in fluid communication with the airflow channel in a central portion (17) of the airflow channel, wherein a cross-sectional area of the airflow channel in the central portion increases in the flow direction through the airflow channel. The mouthpiece provides a flavoring to an aerosol with efficient mixing of the aerosol and the at least one flavoring agent.
