Abstract (en)
[origin: WO2023031167A1] The present invention relates to a perivascular implant comprising (i) a housing comprising a receptacle for an effector matrix, and (ii) a fastening element adapted for at least partially embracing a tubular bodily structure, wherein said housing, said receptacle for an effector matrix, and said fastening element are arranged such that after implantation of the device the receptacle for an effector matrix at least partially is in contact with said tubular bodily structure and/or a vasculature originating from said tubular bodily structure, and to uses, methods, and kit related thereto.
