Abstract (en)  
[origin: CA3228283A1] The present disclosure relates to an at least partly implantable system for injecting a substance into a patient's body, comprising: - a housing adapted for implantation inside the patient's body, the housing having an outer wall with a penetration area, - at least one infusion needle disposed in the housing, and - a drive unit arranged for advancing and retracting the at least one infusion needle in opposite advancing and retracting directions so that a tip end of the at least one infusion needle penetrates, upon advancement of the at least one infusion needle, said penetration area so as to allow for injecting the substance through said penetration area via the at least one infusion needle.
