Abstract (en)

[origin: WO2023030670A1] The invention relates to a mounting aid element (10, 50, 72) for small parts, comprising an elongated body (14) which has a first axial end, wherein a first end face (16) of the first end has at least two molded areas (18), and a second axial end of the body (14) is designed as a holding element. Each molded area (18) has a clamping element (28) which is arranged at a distance to the first end face (16) in the axial direction of the body (14) by means of an elongated spacer element (30). Additionally, each clamping element (28) has at least one clamping surface (32) facing the first end face (16). Finally, each clamping surface (32) is arranged at an identical distance to the first end face (16), and a plate-shaped region, which has a specified thickness, of a component can be firmly clamped between the clamping surfaces (32) and the first end face (16) if necessary.
