Abstract (en)

[origin: WO2023031312A1] The present application discloses a linked foldable mechanism and a children's carrier. The linked foldable mechanism includes a first rod, a second rod, a driving member, and a driven member. The driving member is fixed on the first rod. The driving member includes a first gear teeth portion. The driven member is fixed on the second rod. The driven member includes a second gear teeth portion. The first gear teeth portion is engaged with the second gear teeth portion. The linked foldable mechanism and the children's carrier have a simple structure, and are not easy to cause a sandwiching phenomenon.
