Abstract (en)
[origin: CA3230356A1] Bottom bracket bearing (40), with a bottom bracket bearing shaft (42), a torsion element (44) connected on the driving side to the bottom bracket bearing shaft (42) for conjoint rotation and having a torsion region (50) bounded by a driving-side end (46) and a driven-side end (48), and measurement elements (52, 54, 56, 58) which are designed to measure a time difference, resulting from a deformation of the torsion region (50) in the rotation load mode, between driven-side end (48) and driving-side end (46).
