Abstract (en)
[origin: WO2023031341A1] The invention relates to a light device comprising a first light module (21, 22) and a second light module (31, 32, 33), the first light module having a first light source (41) and a first optical device (42) arranged to form a first light beam (F11, F12), the second light module having a second light source (51) and a second optical device (52) arranged to form a second light beam (F21, F22, F23), the second light module having a third light source (71) and a third optical device (72) having a deflecting member (73) and a diffusing surface (11, 14, 16), the deflecting member being arranged to deflect light emitted by the third source towards said diffusing surface, the light device having a control unit arranged to switch on the third light source when the first light source is switched on.
