Abstract (en)

[origin: CA3231661A1] A vertical blind (10) includes plurality of strip-shaped vertically arranged shading elements (14, 15) which are held in pivot hooks (18) pivotable about a vertical axis. Two shading elements (14, 15) are arranged in each case on mutually remote longitudinal sides of a strip-shaped intermediate element (16) and together with the latter form a blind element (12). Easy assembly and disassembly of the shading elements (12) can be achieved by the fact that multiple blind elements (12) are provided separated from one another. Shading elements (14, 15) adjacent to one another are held by a common swivel hook (18). The swivel hook (18) has a receiving device (21) for the two adjacent shading elements (14, 15).
