Abstract (en)

A terminal according to the present disclosure may perform detection of paging DCI at a corresponding paging occasion on the basis that at least one of a plurality of conditions configured in the terminal is satisfied as a result of monitoring a specific signal related to whether detection of the paging DCI is required for the terminal, and the plurality of conditions may include a first condition for performing the detection of the paging DCI in a state in which the specific signal is detected, and at least one second condition for performing the detection of the paging DCI even in a state in which the specific signal is not detected.
