Abstract (en)
The present invention relates to the operating table extension, especially for endoprosthetic replacement procedures of the knee joint, comprising five subassemblies that work together to allow changing the position of the lower limb in the space of the operating table according to the needs of the operating surgeon during the surgery, wherein the extension includes Subassembly I providing a rigid connection to the operating table and a bracket integrating the entire structure, Subassembly II, whose components allow lower limb positioning in the direction of the vertical axis of the operating table, Subassembly III, whose components fasten and set the position of the limb support, Subassembly IV, whose components enable the positioning of the lower limb in the horizontal plane, perpendicular to the longitudinal axis of the patient, Subassembly V-a cart.
