Abstract (en)

[origin: WO2023073224A1] The present invention relates to genetically altered plants, parts thereof and plant cells that comprises one or more mutations in a conserved motif XDPX of nuclear localized cyclic nucleotide-gated ion channel (CNGC) channels, as well as methods of increasing yield, nodulation and arbuscular mycorrhiza (AM) endosymbioses by introducing the one or more mutation into a CNGC gene.
