Abstract (en)

[origin: WO2023079109A1] The invention relates to a thermal module (10) for use in a heating system, the thermal module being configured: a) to supply a heat carrier for heating an indoor space, and b) to heat incoming cold tap water with heat from the heat carrier, the thermal module comprising on a secondary side thereof:- a cold tap water channel (52) extending from the cold water entry (16) to the secondary entry (36),- a hot tap water channel (38) extending from the secondary exit to the hot tap water exit (18),- a bypass channel (55) which bifurcates from the cold tap water channel (52) at a bifurcation location (54) and merges with the hot tap water channel at a merge location (57) and which bypasses the heat exchanger.
