(54) **Spin-texture process.**

(57) A spin-texture process for producing crimped synthetic filaments is described in which freshly extruded filaments (6) are passed over a quench roll (2) maintained at a surface temperature within the range of from 20°C to 180°C before they are completely solidified and fully drawn as they leave the roll (2). In the case of polyamide filaments, spontaneous crimp as well as latent crimp is observed.
