(54) **Electrophotographic process for forming a visible image.**

(57) Electrophotographic process in which a charge pattern is formed on a photoconductive element comprising a charge generating pigment-binder layer and a smooth charge-conveying top layer and the charge pattern is developed with a one-component developing power of which the particles have a specific resistance exceeding 10^{11} Ohm.m. Preferably the electrophotographic process is performed on a photoconductive element comprising a charge generating pigment-binder layer which is composed of a dispersion of an azo dye in a charge-transfer -complex of a polyvinyl carbazole and a nitrated fluorene derivative.
