(54) Refrigerator comprising several preservation compartments at different temperatures.

3
EP 0 036 238 A3
(57) A refrigerator having a substantially rectangular vertical cross-section and including preservation compartments at different temperatures, characterized in that it comprises two separate freezer compartments (2, 3), each closed by its own door (2A, 3A), substantially located at the opposite ends of a diagonal of the refrigerator vertical cross-section and associated with a common forced air circulation refrigeration circuit, and a refrigerator compartment associated with an independent refrigerator circuit, formed (said compartment) by at least two communicating sections (4, 5), each closed by its own door (4A, 5A) and located at the other diagonal of the vertical cross-section to obtain a zone (11) of a width equal to the maximum internal width of the refrigerator.

DOCUMENTS CONSIDERED TO BE RELEVANT			CLASSIFICATION OF THE APPLICATION (Int. Cl. 3)
