54 Railway turnouts.

57 The invention provides a railway turnout including, singly or in combination, a crossing with wing rail inserts to raise the running surfaces of the wing rails in the region of the nose in the crossing, and a guard rail (310) adjacent a shortened standard switch blade (322), the point (306) of the curved switch blade (308) being positioned opposite the guard rail (310) so that the wheel flanges of car wheels traversing the turnout, are drawn away from the point (306) by the guard rail (310).
