54 **Liquid dispensing package and valve.**

57 The invention provides a package for holding concentrated syrup. The cap seals to the body, and by turning the cap concentrate can be dispensed from the package through an outlet in the cap. The package fits in a dispensing valve having a member displacement of which causes dispensing of the concentrate and at the same time supply of carbon dioxide gas to the interior of the package to drive the concentrate therefrom and cause a flow of carbonated water to mix with the dispensed concentrate to produce a carbonated drink. The invention concerns novel constructions of the package and dispensing valve.
