⑤④ **Constructional toy.**

⑤⑦ A constructional toy consists of a relatively small number of types of components which can be assembled in a relatively large number of constructions. In the simplest embodiment the components consist of a main chassis (10) with either a longitudinal slot (12) which receives constructional members having projecting male connecting means which fit into the slot or else circular recess which receives pegs or pins on constructional members. The set includes a wheel assembly and frame members. The connecting members are connecting pins and pegs (21, 23) which are compatible in many combinations with the other components of the set.
