54 Apparatus in banks, post offices and similar establishments for dispensing valuable papers.

57 An apparatus for dispensing banknotes, comprising a cabinet (10) housing a banknote store, electronic components etc., and a base assembly (62) which forms a base for the cabinet and which can be attached to a wall or a floor of a room in which the apparatus is to be used.

The base assembly comprises a support plate arranged to permit limited rotation of the cabinet (10) relative to the support assembly. Arranged on the undersurface of the cabinet (10) is a number of runners, on which the cabinet rolls as it is rotated and four restpads against which four runners mounted in respect corners of the support plate rest when the cabinet is located in its customer serving position or its re-filling and servicing position. Arranged in the cabinet (10) is a locking arrangement which can be caused to co-act with locking grooves arranged in the support plate, when the cabinet is located in its customer serving position or its re-filling position. Cables extending from the cabinet (10) are placed in coils in a recess in the base assembly, and are drawn from the base assembly close to the wall in which the base assembly is fixedly mounted, in the case of a wall attachment.

The rest pads are wedge-shaped so that when the cabinet is rotated, it is initially lowered and then raised.
