Beverage dispensing lid for a cup.

The lid (10) includes an upstanding annular wall (18) and a bottom (16) connected to the lower part of the wall to define a reservoir (25). A mechanism is provided for mounting the lid to the edge of the cup (14) to prevent leakage of beverage therebetween. The bottom has at least one hole (22) therein adjacent its periphery so that the beverage contained within the cup will flow through the hole into the reservoir when the cup is tipped generally towards the hole thereby permitting the beverage to be readily consumed from the reservoir.
