⑤④ **Newspaper storage container.**

⑤⑦ A container for receiving newspapers entering a newspaper live storage buffer from a printing press. The container is formed by vertically extending corner members (12) having interconnecting elements (14) fixed in spaced relation along the longitudinal length thereof. The bottom of the container defines a gate member (20) hinged to one side of the container and which is operatively associated with a latching lever (34). The latching lever is effective in holding the gate member in position for receiving and maintaining a load of newspapers within the container and of releasing the gate member to effect the unloading of the newspapers.
