⑤④ **Newspaper container loading apparatus.**

⑤⑦ An apparatus for loading newspapers into a container (22) in a newspaper live storage buffer system having an indexing unit (32) for moving the containers individually from the buffer's conveying device to a loading position. In loading position the container is operatively associated with upper and lower carrier conveying devices in which the upper one is provided with a plurality of spaced tine members (54) that are adapted to receive newspapers emanating from a printing press and to form stacks thereon which are lowered to a position for presenting the stacks to the lower carrier conveying device. This device includes a pair of spaced paddle members (68-70) that are driven in an elliptical pathway to a position for receiving the stacks of newspapers from the tine members, and then lowering them into the container.
