㉚ **Construction block.**

㉛ A block (10, 40) for use in construction, particularly though not exclusively paving, has top (12, 42) and bottom (14, 44) surfaces one of which is a rectangle (14, 44) and the other of which is a square (42) or a rectangle (12). In the case where the other surface is a rectangle (12) the block (10) has the major axes of the rectangles mutually perpendicular and has a shape at mid-height in horizontal cross-section which is substantially a square and the length of the side of said square is within the range 66% to 300% of the height of the block (10). In the case where the other surface is a square (42), the major axis of the rectangle is greater in length than the side of the square (42) and the said square (42) has a side of length within the range 66% to 300% of the height of the block (40).
