Mailer construction.

A mailer form comprising an envelope (11) having a front (12) and back (13) sheet secured together along marginal edges thereof. The front sheet has a window area (15). A self-reproducing surface (16') is provided in the envelope and faces the window area (15) whereby a printer having a non-carbonizing ribbon can print over the envelope (11) front sheet to reproduce on the self-reproducing surface (16') information which is visible in the window area (15) and not visible in other areas of the envelope.
