⑯ Method and apparatus of checking an arrangement of printing pages.

⑰ The present invention relates to a method and an apparatus which check, where images for a plurality of page portions are printed simultaneously, whether or not the image on each page is properly arranged in a predetermined position. Particularly, the image of material to be checked is photographed and stored by unit of a section at every page, and the image is displayed on a monitor television by unit of two opened-pages to effect said checking. Thus, in the case of the printed matter in which one image is reproduced over the two-opened-pages, not only checking to see if the arrangement of pages is proper but also checking to see if there is a difference in density or tone between left and right pages can be carried out.
