54 **Hot mill roll brushing system.**

57 A ball joint (27) centrally positioned in the bottom wall of a substantially hollow base (26) is adapted to receive an upstanding conduit (16). A cover comprises a lower annular portion (12) and a hollow glass dome (11) including a prism portion (25) sealed in the lower annular portion, said lower annular portion having an inner base portion (31) resting on the upper portion (32) of the base, whereby the apex of said hollow glass dome (11) is positioned a predetermined distance from said inner base portion (31) and the bottom wall of the base (26), so that the prism portion (25) is in proper registration with respect to a light source (22) centrally supported on the base.

NOESEN R.F.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons
& : member of the same patent family, corresponding document
