54 **Continuous smoothing machine with conveying tape for solid surfaces, particularly adapted for slabs of stony material.**

57 It is a continuous smoothing machine, which has a device able to allow the abrasive or finishing plates 4 to go through a path inclined of a $90^\circ + \alpha$ angle during the going run and of a $270^\circ - \alpha$ angle during the return run, with respect to the longitudinal axis of a conveying tape with

continuous motion for the slab 1 to be worked, α being a prefixed angle chosen in such a way as to allow a plate working path substantially perpendicular to the direction of advancement of the tape.
