54 Improvements in or relating to fitments for mounting on coat hangers.

57 This invention relates to fitments for mounting on coat hangers of the general kind described in United Kingdom Patent Specification No. 1 397 413. The fitment described is in the form of a right circular cylinder consisting of two portions (1 and 2) hingedly connected to one another by a web (11) of synthetic resin material. In the embodiment illustrated, the portion (1) has a semi-circular head (3), a semi-circular base (4) and a semi-circular intermediate platform (5). Similarly the portion (2) has a semi-circular head (6), a semi-circular base (7) and a semi-circular intermediate platform (8). Each of the head, base and intermediate platform portions is provided with a semi-circular recess, of which two are indicated at (9) and (10). The intermediate platform (5) is provided with a projecting pin (12) and the intermediate platform (8) is provided with a recess (13).

When the tally is in use, the two portions are clipped together around the hook (14) of a hanger (15). The pin (12) and the recess (13) may be designed as shown in figure 3 so that, once they have been engaged, they cannot be disengaged without destruction, or alternatively they may be designed as shown in figure 5 so that they can be disengaged.
