54 Rooflight.

57 An arch-shaped or barrel rooflight comprises several juxtaposed arch-shaped glazing panels (1) interconnected along their edges by glazing bars (4). In a single-glazed case the glazing bars (4) comprise upper and lower bar members (21 and 22) supported on a receiving frame (7) on an upstand (2) from a roof. The two bar members (21 and 22) grip the edges of the panels (1) but are themselves spaced apart to avoid a thermal bridge. The bar members (21 and 22) are held together by means of the tension generated in the upper (21) by an axial bolt (36) fixed to the receiving frame (7). A complementary compression is induced in the lower bar member (22).
