 **Window sash or frame.**

 The side jambs (11C, 11D), the sill (11B) and the frame head (11A) of a window sash or frame all have substantially the same profile. Each element is provided with one or more tenons (18A, 18B, 18C) at one end which correspond in shape and position to an equal number of mortices (19A, 19B, 19C) at the other end so that the elements can readily be joined to one another at the corners of the sash or frame. This should simplify and decrease the cost of production and assembly of window frames and sashes.
